

AtlantMar Equipment AS

Pricing & FX Exposure Analysis

Marta Caballero Puig
Pricing & Business Analyst Case

Executive Summary

Key findings

- Revenue is highly concentrated in two product segments (100 & 300)
- Revenue growth in these segments is primarily volume-driven, with declining average prices
- ~75% of revenue is exposed to foreign currencies, with USD representing the largest exposure (~53%)
- Procurement costs are largely NOK-denominated, creating limited natural hedging

Strategic implications

- Margin protection requires stronger pricing discipline in core segments
- FX exposure should be actively managed through hedging or procurement alignment

AtlantMar Pricing, Segment Performance and FX Exposure

AtlantMar is becoming increasingly international

- Foreign-currency revenue has grown significantly
- Currency movements now affect reported revenue and profitability
- Leadership needs a clearer view of the drivers of commercial performance

Key drivers to understand

- Product mix
- Pricing quality
- FX exposure
- Procurement currency exposure

Data Sources & Analytical Approach

Data sources

- `customer_invoices`: sales invoices with item, price, quantity and currency
- `vendor_invoices`: procurement invoices for components and parts
- `gl_transactions`: general ledger revenue and cost postings

Data scope

- 2016–2025 full years & 2026 partial
- Global sales and procurement transactions

Purpose of the data

- Product segment performance
- Pricing dynamics (price vs volume)
- Revenue FX exposure
- Cost-side FX and potential natural hedge

Data Quality & Preparation

Dataset checks

- Reviewed structure and completeness of all three tables
- Pricing and quantity fields are largely complete
- Some missing currency values → excluded from FX analysis

Coverage

- Transactions from 2016 – Feb 2026
- Invoice-level detail enables pricing and volume analysis

Preparation

- Converted revenue to NOK where applicable
- Removed invalid rows ($Qty \leq 0$ or $Unit\ price \leq 0$)

Revenue Is Highly Concentrated in a Small Number of Product Segments

Key insights

- Segment 100 dominates AtlantMar's revenue (~6.6 BNOK)
- Segment 300 is the only other major contributor (~1.8 BNOK)
- Together, segments 100 and 300 account for the vast majority of revenue

Additional observation

- Price realization is broadly consistent (~94–95%) across the main segments, suggesting relatively stable discounting
- Segment 600 shows unusual low price realization (~56%), indicating potential heavy discounting or different pricing

Pricing Realization Differs Across Segments

Key insights

- Most product segments achieve ~90–100% price realization, suggesting relatively consistent discounting
- Segment 600 stands out with significantly lower realization (~56%), indicating heavy discounting or different contract structures
- Pricing performance therefore appears uneven across segments, suggesting potential margin improvement opportunities

Revenue Growth: Price vs Volume Dynamics

Growth dynamics in the largest segments

- In both core segments (100 and 300), sales volumes increased over time
- Average unit prices declined significantly, particularly after 2022
- Revenue growth has therefore been primarily volume-driven rather than price-driven

Commercial implication

- AtlantMar appears to rely on sales expansion rather than pricing power to drive growth

A Significant Share of Revenue Is Exposed to Foreign Currency

FX exposure

- ~93% of revenue is heavily concentrated in three currencies.
- ~75% of AtlantMar's revenue is generated in foreign currencies
- USD represents the largest exposure (~53%), followed by EUR (~22%)
- NOK accounts for ~18% of revenue, meaning most sales are exposed to FX movements

Commercial implication

- Revenue is highly sensitive to USD/NOK exchange-rate fluctuations
- Missing currency observations (~1%) do not materially affect the FX analysis

Procurement FX Exposure and Potential Natural Hedge

Cost-side FX exposure

- Procurement is heavily concentrated in NOK
- Foreign-currency procurement exists (EUR, CNY, USD) but is much smaller than revenue exposure

Natural hedge assessment

- AtlantMar sells primarily in USD (~53%) and EUR (~22%), but purchases mainly in NOK
- This creates limited natural hedging of FX exposure

Commercial implication

- Profitability is highly sensitive to USD/NOK exchange-rate movements

FX Sensitivity: Impact of USD/NOK Movements

- USD represents AtlantMar's largest FX exposure (~53% of revenue)
- A 10% change in USD/NOK implies an estimated ~454 MNOK change in reported revenue
- With limited natural hedging from procurement, this FX sensitivity can materially affect profitability
- FX exposure may also evolve with changes in product mix and sales volumes

Scenario	Assumption	Impact
USD strengthens	USD/NOK +10%	revenue increases
Base case	stable FX	neutral
USD weakens	USD/NOK -10%	revenue decreases

Assumptions: USD exposure assumed constant at current revenue mix (~53%) & Scenarios illustrate FX sensitivity rather than a full forecast

Supporting Data Exploration (Power BI)

Revenue currency exposure by segment

USD dominates the largest revenue segments

Currency (groups) EUR NOK Other USD

Revenue by currency

USD represents more than half of total exposure

Currency (groups) USD EUR NOK Other

Revenue trend (2016–2025)

Average invoice value by currency

Strategic Recommendations

Strengthen Pricing Discipline

Why?

Average prices have declined significantly over time

Revenue growth is primarily volume-driven

□ Actions

Review pricing strategy in the largest segments (100 & 300)

Improve discount governance and price realization

Focus on protecting margin in high-volume segments

Reduce FX Risk Exposure

Why?

~75% of revenue is in foreign currency

Procurement is largely NOK-denominated

Limited natural hedge increases USD/NOK sensitivity

□ Actions

Consider FX hedging strategies (forwards/options)

Align procurement currency more closely with revenue currency where possible

Monitor Segment Concentration Risk

Why?

Two segments represent the vast majority of revenue

□ Actions

Monitor performance and pricing closely in core segments

Evaluate opportunities to diversify revenue sources
