

Kahoot!

Customer Success Growth Insights

Retention • Churn Risk • Expansion Opportunities

Case: Data Analyst & Coordinator
Marta Caballero Puig
January 2026

Executive summary: where to focus

What we learned

- Healthy retention in 2024-2025: churn impact mainly from high-volume segments, not niche tiers.
- Account access losses are time-clustered: it seems like some periods drive most of real churn.
- Expansion in behavior: high usage on lower tiers (especially close to renewal) signals to customers outgrowing their plans.

What we should do next

1. Protect renewals: run a sprint to outreach at-risk accounts renewing soon with a specified playbook.
2. Prioritize upsell timing: start with subset renewing within 60 days and target “high usage” + “low tier” subscriptions.
3. Activate before expanding: usage of invites, logins and creators are leading indicators. Fix activation gaps before pushing for upgrades.

Method

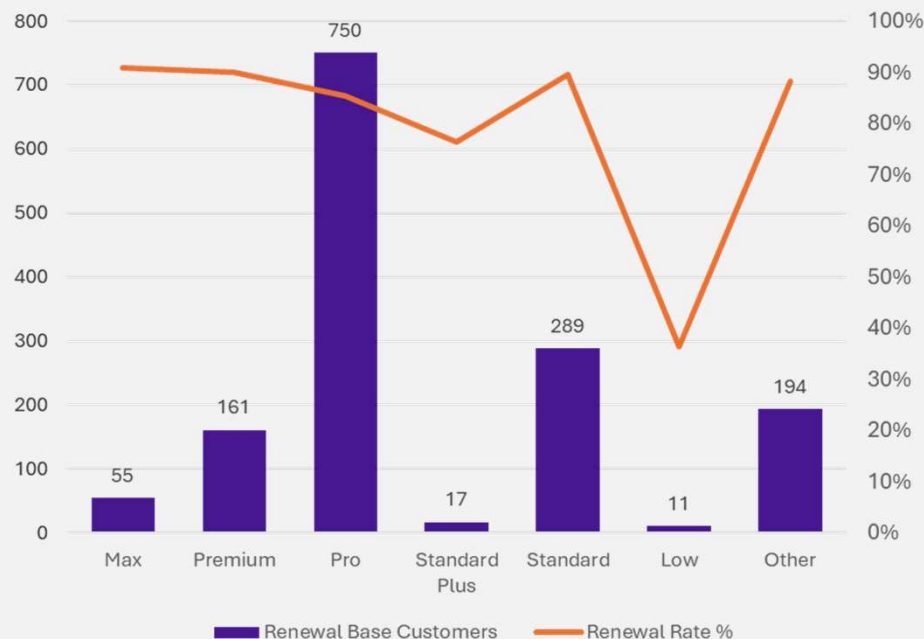

Data prep: standardized ~ 100 plan name variants into 8 plan tiers to ensure consistent segmentation.

Definitions used: 90-day renewal window + effective churn (“lost access”) + based segmentation. Focus on 2024-2025 for current dynamics.

Tier grouping used for segmentation (higher/lower tiers): Pro+ = Pro/Premium/Max; Standard & below = Standard/Standard Plus/Low/Other

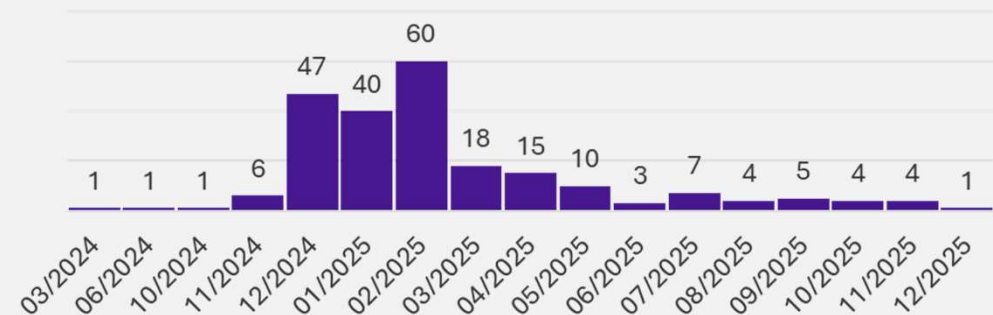

Retention & Churn: segmentation

Customer renewal rate by plan tier

- **Churn concentrates in Pro:** 108/756 churned customers (~14%)
- **Overall retention is strong (2024-2025):** most tiers have ~86-93% renewal (90-day definition)
- **Note on winbacks:** older churn can look inflated due to long gaps + later reactivation (counted as churn at original end of month)

Effective Churn

Expansion opportunities

Who is outgrowing their plan?

Usage / tier	Pro & +	Standard & below
High usage	264	143 
Low usage	2156	1394

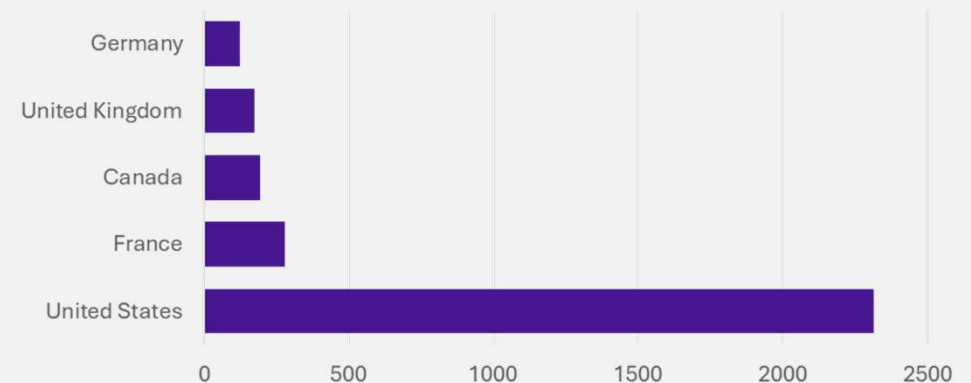

Upsell targets: 143 customers are heavy users but on lower tiers. 23 renew within 60 days → ideal timing to offer an upgrade.

Expansion opportunity: large accounts with many seats but low activation. Focus on onboarding + activation and convert to seat/tier upgrade.

Next actions (playbook)

1. **Upgrade:** standard and below + high usage (143)
2. **Renewal outreach:** prioritize 23 renewing ≤60d
3. **Seat activation:** many seats + low invites → training + champions
